

# Lab Notification - VetXML

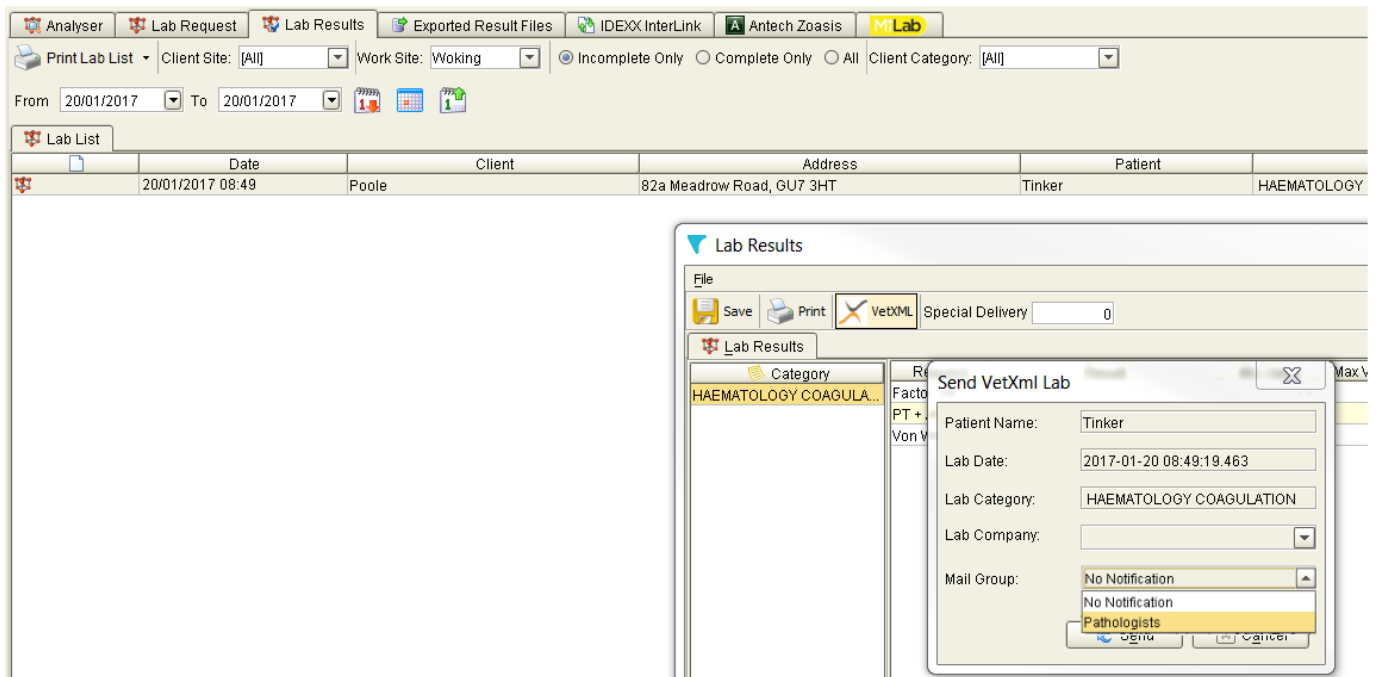

2.7 New Feature Documentation

## What does it do?

A group of Users will be notified when results are available for a lab request sent to VetXML.

## How does it work?

When sending a lab result to VetXML users can now specify a 'Mail Group' to notify once lab results have been received.

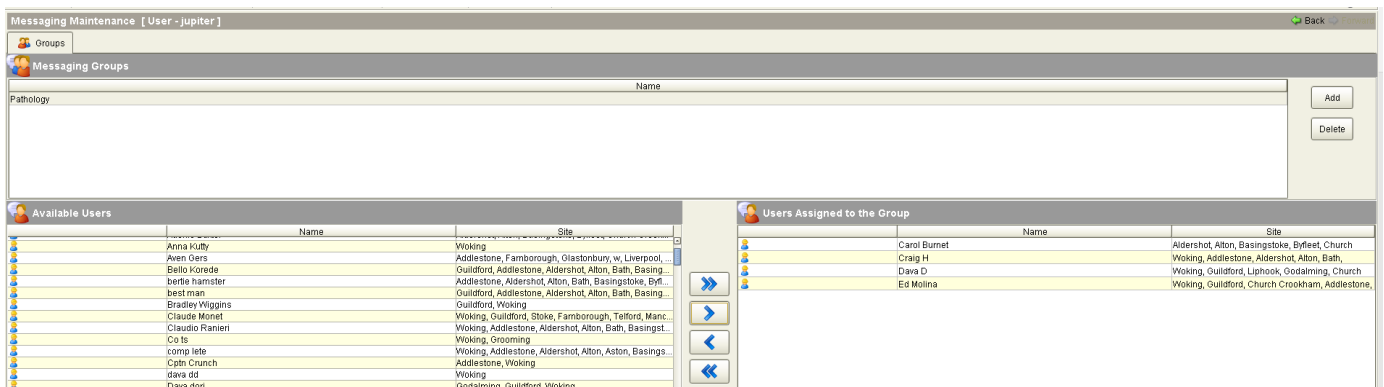

The screenshot shows the 'Lab Results' window in the Vet Space software. A 'Send VetXml Lab' dialog box is open, allowing the user to configure the notification. The fields are as follows:

Field	Value
Patient Name	Tinker
Lab Date	2017-01-20 08:49:19.463
Lab Category	HAEMATOLOGY COAGULATION
Lab Company	[Dropdown]
Mail Group	Pathologists

## Mail Groups

Mail Groups can be created using the Messaging Maintenance tool. This can be found in Utilities > Messaging > Message Centre Maintenance.

Select Add to add a group and use the arrows provided to allocate users to a mail group.

The screenshot shows the 'Messaging Maintenance' tool. It displays a list of 'Messaging Groups' (currently empty) and a list of 'Available Users'. The 'Available Users' list includes the following entries:

Name	Site
Anna Kuffy	Woking
Aven Oers	Addlestone, Farnborough, Glastonbury, w, Liverpool...
Bello Korede	Guildford, Addlestone, Aldershot, Alton, Bath, Basing...

comp lete	Woking, Addlestone, Aldershot, Alton, Aston, Basing...
Cptn Crunch	Addlestone, Woking
dava did	Woking
Dava don	Godalming, Guildford, Woking

## How will I be notified?

A notification will be sent to the users Internal Messaging inbox. This mail will contain a link to the client and patient it relates to.
